Beginning on page 13, David Yozzo and Mark Laska present the results of an assessment they did of the National Oceanic & Atmospheric Administration's National Estuarine Reserve System. The system of 26 research sites is spread along the coastal fringe of the United States from Alaska to Maine and, as Yozzo and Laska report, it offers wide-ranging opportunities for restoration ecology and ecological restoration. One of the sites, the Oneonta Marsh tidal linkage restoration project at the Tijuana River Reserve in southern California, is pictured above. *Photo by Mark Laska*
