PHC RECLAMATION, INC.

Back to Nature

A NATURAL SYSTEMS APPROACH

COMPANY OVERVIEW:

PHC Reclamation, Inc. (PHC-REC) is a newly formed company established to provide cost-effective, biologically based solutions for land reclamation and restoration projects. The company's founders are leaders in the use of mycorrhizal fungi for the establishment of trees, shrubs, forbs and grasses on lands that have been disturbed by mining, construction and other activities. PHC-REC is a sister company to Plant Health Care, Inc., Pennsylvania, the world technology leader in the commercial production of endo- and ectomycorrhizal fungal inoculant products.

THE PHC-REC EXPERTS:

Donald H. Marx, Ph.D. • The winner of the prestigious Marcus Wallenberg Prize in Forestry; for over 30 years, he has pioneered the use of specific mycorrhizae, organic soil amendments and natural soil processes to successfully revegetate minelands and other highly degraded sites.

Charles E. Cordell, Ph.D. • Has over 25 years of experience as the lead scientist in the technology transfer and operational production of plants with specific mycorrhizae in nurseries for reforestation, mineland reclamation and other land uses.

Len Marrs • Has over 25 years of extensive hands-on experience in the arid Western U.S. on the engineering of soil and water resources. His expertise is now integrated with PHC microbial technologies for the reclamation and revegetation of minelands and other disturbed sites.

TECHNICAL SUPPORT:

PHC-REC scientists and technical experts work directly with customers to help design and implement turn-key solutions for difficult land restoration projects, including large-scale mineland reclamation, habitat restoration and reforestation of degraded sites.

PRIMARY SERVICES:

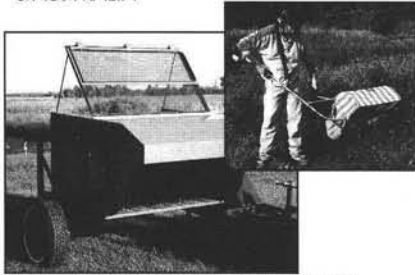

PHC-REC applies technical expertise, emerging techniques and practices, and its own high quality products to tough revegetation and renewal projects, including:

- Grass and shrub revegetation of severely disturbed lands using exclusive pelletized VAM technology; pellets of Mycor™ VAM Cocktail™ endomycorrhizal fungal inoculum and municipal biosolids accelerate the establishment of vegetation on even the toughest of soils and climates.
- Reforestation of poor and distressed soils using endo- and ectomycorrhizal fungal inoculated tree seedlings, including PHC-REC's own MycorTree™ seedlings.
- Bioremediation and phytoremediation of contaminated soils, such as industrial wastes, brown fields, landfills, etc., using fungal and bacterial technologies with specific plant species.

ZENTNER  ZENTNER

Land Planning and Restoration

Success of environmental restoration projects is measured by their performance over time. That success is a direct reflection of the skill of the restoration team—and its ability to solve complex ecological and regulatory issues.

Over the last decade, Zentner and Zentner has managed over 500 restoration projects. The experience of success just feels good to us.

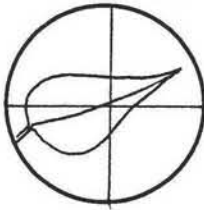

Our services include:

- Wetland Delineations
- Restoration and Mitigation Planning
- Biological Assessments
- Endangered Species: Section 7 and 2081 Approvals
- Regulatory Planning and Permitting
- Construction and Post Construction Monitoring

Contact us at one of our California offices.

View through eyepiece

Cover-Point

Optical Point Projection Device

for use in point-intercept cover sampling

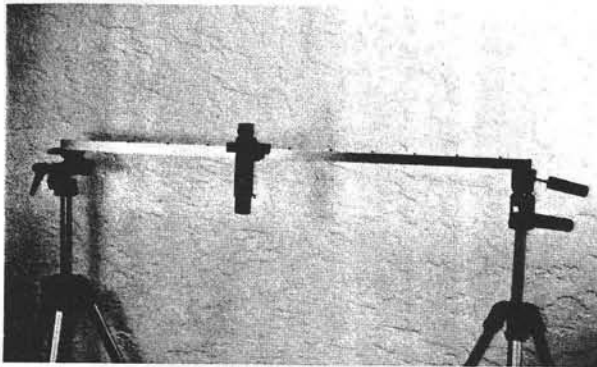

Uses

- o Monitoring of restored areas
- o Assessment of cover performance standards
- o Baseline studies
- o Erosion control modeling studies

Rugged construction of primarily anodized aluminum

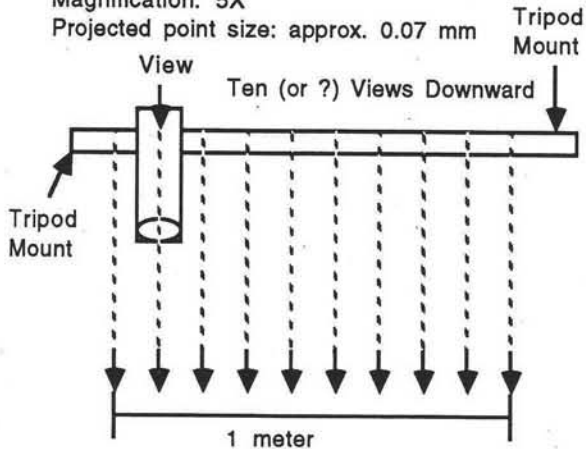

Technical Features

- o High resolution optics including microscope reticle (crosshairs)
- o Very low parallax (stable point projection)
- o Downward or upward projection, allowing equitable treatment of overstory and understory strata plants (Model 5)
- o Ten (or any number) points along one-meter bar (Model 4)
- o Lightweight, rugged construction
- o Mounts on standard photographic tripods

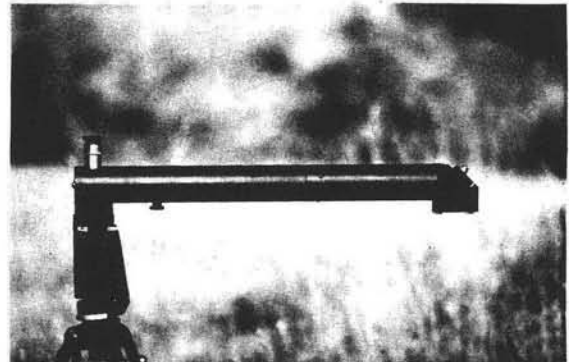

Model 4 - Specifications

Length: 118 cm
 Weight: 899 gm (2.0 lb)
 Focus range: (40 cm to 200 cm)
 Magnification: 5X
 Projected point size: approx. 0.07 mm

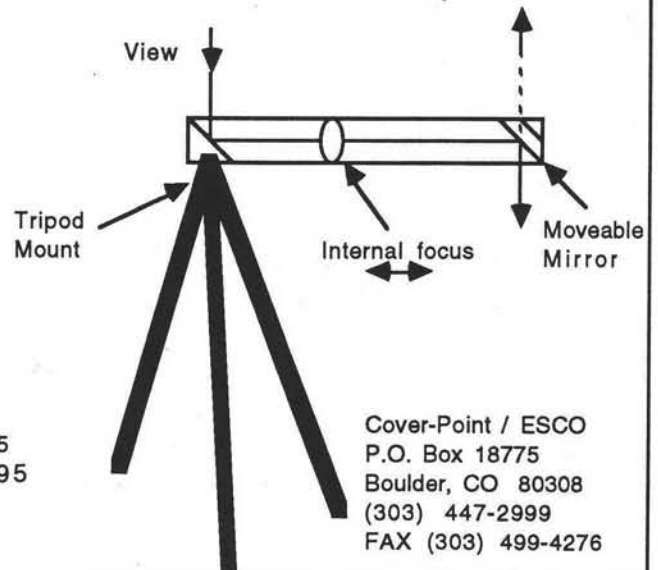

Pricing

Model 4 (multiple points, down only)..... \$985
 Model 5 (up and down)..... \$1295

Restoring native habitats

"This book will serve as the foundation for amphibian conservation in the Midwest. The conservation essays in particular are imaginative, provocative, and exciting. . . . It will bring much attention to the topic of amphibian decline."

—Whit Gibbons, professor of ecology, University of Georgia's Savannah River Ecology Laboratory

Status and Conservation of Midwestern Amphibians

Edited by Michael J. Lannoo

Under the mantle of the Declining Amphibian Populations Task Force, this timely book addresses three fundamental questions for the midwestern United States: are amphibians declining; if so, why; and, if so, what can be done to halt these losses?

In the Midwest—defined here as Missouri, Iowa, Illinois, Indiana, Ohio, Minnesota, Wisconsin, and Michigan—there can be no doubt that the number of salamanders and frogs has declined with Euro-American settlement and the conversion to an agriculturally dominated landscape. Habitat loss and landscape fragmentation have been major factors in this decline, as have been aquacultural uses of natural wetlands. The goal of the forty-two essays in this well-documented, well-illustrated book is to put between two covers all we know now about the status of midwestern amphibians. Organized into sections covering landscape patterns and biogeography, species status, regional and state status, diseases and toxins, conservation, and monitoring and applications, this landmark volume will serve as the foundation for amphibian conservation in the Midwest.

448 pages, 22 photos, 133 drawings, \$49.95 cloth/\$29.95 paper

Okoboji Wetlands

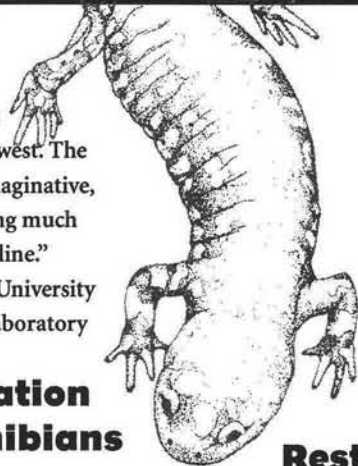

A Lesson in Natural History

By Michael J. Lannoo

Lake Okoboji in northwest Iowa is the jewel of the Iowa Great Lakes. By highlighting wetland animals, especially the salamanders, toads, and frogs that thrive there, Lannoo promotes Okoboji's ecosystems as symbols of the worldwide crisis of pollution, declining biodiversity,

and habitat mismanagement.

190 pages, 16 color & 29 b&w photos, 22 drawings
\$29.95 cloth/\$14.95 paper

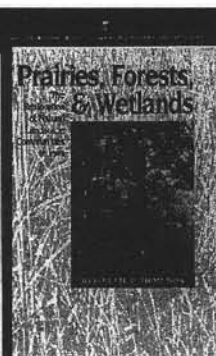

Restoring the Tallgrass Prairie

An Illustrated Manual for Iowa and the Upper Midwest
By Shirley Shirley

The author has provided a step-by-step guide to reconstructing the natural landscape of the tallgrass prairie region. Chapters on planning, obtaining, and selecting plants and seeds, starting seeds indoors, preparing the site, planting, and maintenance set the stage for comprehensive species accounts. There is also firsthand information on soil, moisture, sun, and pH requirements; location, size, and structure; blooming time and color; and propagation, germination, and harvesting for more than a hundred wildflowers and grasses.

346 pages, 111 drawings, 5 tables
\$29.95 cloth/\$16.95 paper

Prairies, Forests, and Wetlands

The Restoration of Natural Landscape Communities in Iowa

By Janette R. Thompson

This timely, practical book combines a nontechnical natural history of each native community with a how-to manual for lay restorationists dedicated to reconstructing prairies, forests, and wetlands. The author discusses site selection and preparation, plant species, planting techniques, costs, and maintenance of restoration areas. She includes a useful list of sources for plant materials in and near Iowa as well as information on the birds and mammals, reptiles and amphibians, of these landscapes.

Wetlands of the American Midwest

A Historical Geography of Changing Attitudes

Hugh Prince

"Hugh Prince offers an even-handed and richly textured view of the long struggle to exploit and protect the wetland environments of the Middle West. Long regarded as frustrating obstacles to progress, swamps, marshes, and bogs are now seen as indispensable elements of the regional ecosystem. For those who wish to understand the problematic but crucial role wetlands have played in the history of American agriculture and land use, this book is an invaluable guide."—William Cronon, author of *Nature's Metropolis: Chicago and the Great West*

Best Source For Erosion Control and Bioengineering Products

KoirMat™

• Woven Coir fabric
(400, 700 & 900 gms/sq.m)

KoirLog™

• Coconut fiber log
(12", 16" and 20" diameter)

**100% Biodegradable
Erosion Control
Products**

We also supply:
Stitched coir blankets,
KoirBed, KoirPeat,
KoirPot, KoirChip,
KoirFence & JuteMesh

PRODUCERS OF PLANT MATERIALS FOR LARGE SCALE NATIVE RESTORATIONS AND WETLAND MITIGATION

- ◆ Over 400 Native Species
- ◆ Prairie, Wetland and Savanna
- ◆ Seeds and Plants
- ◆ Container Grown Emergents
- ◆ Variety of Sizes, 2 inch Plugs to 2 Gallon Pots
- ◆ Contract Growing Available

We can help you successfully revegetate the most difficult sites:

- Arid lands, deserts.
- Disturbed military training areas.
- Eroded granitics.
- Roadcuts.
- Subalpine tarweed.

We utilize local native materials for permanent ecological restoration.

Office of Continuing
Professional Education**

announces the

1998 Restoration & Wetland Programs

Our unique restoration and wetland classes were developed for a wide range of professionals who will benefit from our hands-on approach to learning. If you complete our 6-day course sequence in *Vegetation Identification**, *Hydric Soils** and *Methodology of Delineating Wetlands**, you will be well qualified for the test proposed by the United States Army Corps of Engineers to obtain certification as a wetland delineator.

Restoration of Native Plant Meadows and Woodlands May
Freshwater Wetland Construction Techniques July
**Vegetation Identification for Wetland Delineation* July, August
**Hydric Soils* September, October
**Methodology of Delineating Wetlands* October
Introduction to Wetland Identification October
Hydrology of Wetlands October
Soil Bioengineering for Streambank Stabilization October
Winter Vegetation Identification for Wetland Delineation November

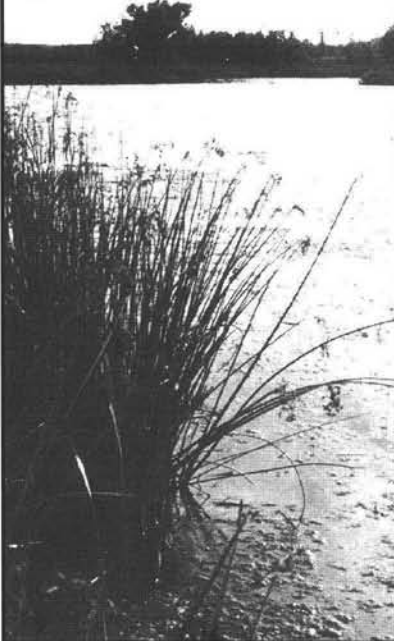

Register now by contacting the Cook College Office of Continuing Professional Education, Rutgers, The State University of New Jersey, 102 Ryders Lane, New Brunswick, New Jersey 08901-8519; or call (732) 932-9271.

Cook College offers over 400 classes for environmental professionals. Visit us online at <http://aesop.rutgers.edu/~ocpe>.

Otter Creek Wetland Mitigation Bank

AES provided pioneering ecological services for the first private wetland bank in the U.S.

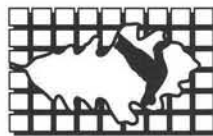

Solid Science

For over 20 years, our ecologists have applied solid science to the restoration of thousands of acres of native prairie, wetland, savanna and woodland systems.

If you're looking for successful, sustainable natural solutions, we invite your inquiry.

Expertise

- ✱ Wetlands delineation, mitigation, permitting and monitoring
- ✱ Prairie restoration, design and installation
- ✱ Conservation development, land use planning
- ✱ Fisheries, bird and wildlife studies
- ✱ Largest prairie nursery in U.S.
- ✱ Natural areas management
- ✱ Ecological research and environmental impact studies
- ✱ Landfill/mine reclamation
- ✱ Streambank stabilization
- ✱ Hydrologic studies
- ✱ Expert witness, legal discovery

Great Plains Research

A JOURNAL OF NATURAL AND SOCIAL SCIENCES

Great Plains Research, a biannual multidisciplinary international journal, publishes original scholarly papers in the natural and social sciences dealing with important issues of the Plains environment. It includes articles from symposia, information on upcoming conferences, and reviews of books addressing topics pertaining to the Great Plains.

ABSTRACTED/INDEXED IN: *America: History and Life, Cambridge Scientific Abstracts, Historical Abstracts, Geo Abstracts and GEOBASE, Meteorological and Geostrophical Abstracts, and Sociological Abstracts, Inc.*

PUBLISHER: Center for Great Plains Studies, University of Nebraska

ISSN: 1052-5165

We invite manuscripts from regional scholars reporting original data in scientific or social scientific approaches, and of interest to a diverse audience. Interested scholars please contact the editor for information about style and submission procedures.

SUBSCRIPTION RATES PER VOLUME YEAR:

U.S. Individual \$25.00

Canada Individual \$28.00

Other Foreign Individual \$35.00

U.S. Institutional \$50.00

Canada Institutional \$53.00

Other Foreign Institutional \$60.00

Submit check or money order in U.S. currency to *Great Plains Research*.

Restoration Ecologist Position Open

The Nature Conservancy has an opening for the position of National Restoration Ecologist. The Restoration Ecologist will articulate and coordinate the ecological restoration philosophy and strategy for The Nature Conservancy, an international non-profit organization whose mission is to conserve the diversity of life on earth by protecting the lands and waters it needs to survive. S/he will provide broad planning, training, research guidance, and information to field staff planning or conducting ecosystem restoration projects. The Restoration Ecologist will serve as a liaison with the scientific research community, restoration practitioners, regulators,

and Nature Conservancy stewardship staff. S/he will provide cross-organizational strategic vision and will develop research projects in conjunction with Conservancy staff and partners yielding restoration techniques or concepts that can be generalized. The position is supervised by the National Director of Stewardship and is based in Arlington, VA.

Entrance requirements include an advanced degree in restoration ecology or a closely related field, and at least three years' experience in applied restoration and monitoring.

The closing date for this position will be July 30, 1998. The start date will be in October 1998.

For a detailed job description with duties and entrance requirements, please contact Tes Slominski, The Nature Conservancy, 1815 North Lynn Street, Arlington, VA 22209, phone: 703-841-5378, fax: 703-247-3674, email: tslominski@tnc.org.

Run your (horizontal) business card and reach the most influential people in the field. Black/white preferred. Cards with colored paper or ink will be made into contact prints for an additional charge. Do not staple, paper clip or write on card. **Rate: \$70 per insertion. A 10% discount given for four consecutive insertions.** Winter '98 closes Sept. 8 and will be mailed Dec., 1998. Send order to: **Restoration & Management Notes, University of Wisconsin Press, 2537 Daniels Street, Madison, WI 53718. Phone: 608/224-3884. Fax: 608/224-3883.**
Please call for quarter page or larger size ad rates.
