"There's nothing more exciting than a comeback story, and this is one for the ages." —DAVID GESSNER, author of Return of the Osprey

David Wingate is known in the conservation community as a living legend for single-handedly bringing back the cahow—or Bermuda petrel—a bird once thought to have vanished completely. After one was found in 1951, Wingate devoted his life to giving them the chance they needed in their struggle for survival. With only the fossil record and centuries-old documents for guidance, he recreated as best he could an entire pre-colonial ecosystem—from plants and trees to amphibians, insects, native bird species, and even bacteria. It took six decades of obsessive dedication, but Wingate has seen his dream fulfilled as the birds returned to Nonsuch, the island on which he recreated their habitat. Wingate's story is an inspiring celebration of the resilience of nature, the power of persistence, and the value of going your own way.

"There are few success stories in the efforts to stop the relentless assault on the species we share the planet with, and *Rare Birds* is a lovely chronicle of one of them. . . . Unassumingly but beautifully told, and chockfull of fascinating natural history."

The Colorado Plateau V

Research, Environmental Planning, and Management for Collaborative Conservation Edited by CHARLES VAN RIPER, MIGUEL L. VILLARREAL, CARENA J. VAN RIPER, and MATTHEW J. JOHNSON

This volume, the fifth from the University of Arizona Press and the tenth overall, focuses on adaptation of resource management and conservation to climate change and water scarcity, protecting biodiversity through restructured energy policies, ensuring wildlife habitat connectivity across barriers, building effective conservation networks, and exploring new opportunities for education and leadership in conservation science.

An informative read for people interested in the conservation and natural history of the Colorado Plateau, the book will also serve as a valuable reference for those engaged in the management of cultural and biological resources, as well as scientists interested in methods and tools for land and resource management throughout the West.

Plant Life of a Desert Archipelago

Flora of the Sonoran Islands in the Gulf of California RICHARD S FELGER and BENJAMIN THEODORE WILDER, in collaboration with HUMBERTO ROMERO-MORALES

Plant Life of a Desert Archipelago is the first in-depth coverage of the plants on islands in the Gulf of California found in between the coasts of Baja California and Sonora. This collective effort weaves together careful and accurate botanical science with the rich cultural and stunning physical setting of this island realm.

Land Planning and Restoration

Success of environmental restoration projects is measured by their performance over time. That success is a direct reflection of the skill of the restoration team—and its ability to solve complex ecological and regulatory issues.

Over the last decade, Zentner and Zentner has managed over 500 restoration projects.

Our services include:

- Wetland Delineations
- Restoration and Mitigation Planning
- Biological Assessments
- Endangered Species: Section 7 and 2081 Approvals
- Regulatory Planning and Permitting
- Construction and Post Construction Monitoring
