ESSENTIAL GUIDES FROM PURDUE UNIVERSITY

NATIVE TREES OF THE MIDWEST

Identification, Wildlife Values, and Landscaping Use

Sally S. Weeks, Harmon P. Weeks, Jr., and George R. Parker

Paperback, 9781557535726, \$45.00 | E-book available, \$22.99

Native Trees of the Midwest is the guide to identifying trees in Indiana and surrounding states, written by three leading forestry experts. Descriptive text explains how to identify 131 species in any season and over 750 color photographs show all important characteristics.

Not only does the book allow the user to identify trees and learn of their ecological and distributional attributes, but it also presents an evaluation of each species relative to its potential ornamental value for those interested in landscaping. Since tree species have diverse values to wildlife, an evaluation of wildlife uses is presented with a degree of detail available nowhere else. The revised and expanded second edition contains a chapter on introduced species that have become naturalized and invasive throughout the region.

SHRUBS AND WOODY VINES OF INDIANA AND THE MIDWEST

Identification, Wildlife Values, and Landscaping Use

Sally S. Weeks and Harmon P. Weeks, Jr.

Paperback, 9781557536105, \$45.00 | E-book available, \$22.99

As the definitive identification guide to the shrubs and woody vines of Indiana, this book also provides coverage of 90% of the species to be found in surrounding Midwestern US states. As well as covering indigenous species, it also includes all currently known invasive shrubs.

Descriptive text explains how to identify all 165 species in any season, and over 1300 original color photographs taken by Sally Weeks detail all important characteristics. The authors provide practical guidance concerning the potential ornamental value of each species for those interested in landscaping and also evaluate their potential value for encouraging wildlife. Designed for experts in natural resource management as well as the interested general public.

THE COMPLETE PLANT SELECTION GUIDE FOR LANDSCAPE DESIGN

Marc C. Stoecklein

Paperback, 9781557535467, \$55.00

The second edition of this easy-to-use reference guide for choosing plant material for landscape designs includes comprehensive lists for each of the major plant groups, including trees, shrubs, groundcovers, perennials, vines, grasses, and ferns. The book is technical enough for the professional (including landscape architects, designers, and contractors), yet simple enough to be used by the layperson.

“The beauty of this book is that anyone can use it. You don’t need a PhD to figure out what plants will work for you in a specific area. Have a wet area? Look up the list of trees, shrubs, etc., that thrive there. Need a tree that can take full sun or one that can tolerate urban conditions? Look it up. If you are an avid gardener, you should add this to your library. It should be required reference material in any landscape architecture or design course.”

—*Susan Banks, Gardens Editor, Pittsburgh Post-Gazette*

Success of environmental restoration projects is measured by their performance over time. That success is a direct reflection of the skill of the restoration team—and its ability to solve complex ecological and regulatory issues. Over the last decade, Zentner and Zentner has managed over 500 restoration projects.

Our services include:

- Wetland Delineations
- Restoration and Mitigation Planning
- Biological Assessments
- Endangered Species: Section 7 and 2081 Approvals
- Regulatory Planning and Permitting
- Construction and Post Construction Monitoring

5th National Conference on Ecosystem Restoration NCER

July 29 – August 2, 2013 | Greater Chicago, IL / Great Lakes Region | Renaissance Schaumburg Convention Center Hotel

MARK YOUR CALENDAR and make plans to attend the 5th National Conference on Ecosystem Restoration. NCER draws hundreds of experts — policy makers, scientists, engineers, and managers — on large and small-scale restoration from around the country and world. Presentations feature efforts and challenges affecting ecosystem restoration. While the focus of the 2013 conference is the Great Lakes Region, NCER draws conference participants from a wide range of systems and has built a reputation as being the preeminent venue for cross-system dialogue.

WHY YOU SHOULD ATTEND

NCER '13 will help you expand your knowledge, share your experience and network with colleagues from across various disciplines such as engineering, science, economics and the social sciences. This is an excellent opportunity to increase your “toolbox” with cutting edge science, modeling and data management tools. Join us and participate in the ecosystem restoration discussion on:

- Effective partnering to integrate planning, policy, science and engineering to provide effective, relevant and timely solutions
- Combining state-of-the-art approaches, technology, tools and information to solve problems and achieve environmental sustainability
- Ensuring the continuity and completion of large-scale, multiple year projects that involve multiple government agencies, non-government organizations, tribal governments and other partners
- Setting goals and objectives
- Defining success

“This conference, in my view, is THE best ecosystem restoration forum for those interested in getting a snap shot of what’s happening across the country in a variety of habitat settings. Most importantly, NCER draws both technical and management expertise.”

—Timothy D. Feather, Ph. D.
Vice President, CDM Smith, Carbondale, IL, www.cdmsmith.com

CONSIDER THE POWERFUL BENEFITS OF NCER '13 WHEN PITCHING ATTENDANCE TO YOUR SUPERVISOR...

- Your colleagues, and even your competitors, will be there. By joining them, you'll learn from your peers and keep the playing field even.
- When you meet face-to-face with others working on similar projects, you'll build more interactive, cooperative relationships and greater savings.
- In just a few days you'll get months worth of valuable technical training, education and networking. Piecing together an equivalent experience would keep you out of the office much longer and cost much more.
- Your whole team will benefit from the tips and expert knowledge you gather at NCER '13. And if you're new to the industry, NCER '13 is the best way to make connections to help you be more effective in your position.
- While it may seem counterintuitive to spend more money on advertising and marketing with so many people and organizations cutting back on expenses, NCER '13 is a great opportunity to build your brand, expand your presence and gain market share. **People will still be buying goods and services and they will buy from those who they trust and see in the marketplace.**

Participate in NCER '13 and maintain visibility for your organization as a LEADER in Ecosystem Restoration!

GREAT PLAINS RESEARCH

A Journal of Natural
and Social Sciences

Edited by Gary Willson

Great Plains Research publishes original research and scholarly reviews of important advances in the natural and social sciences with relevance to and special emphases on environmental, economic and social issues in the Great Plains. It includes reviews of books and reports on symposia and conferences that included sessions on topics pertaining to the Great Plains. The overall goals are to develop GPR as a centralized outlet for science of regional importance, to communicate important scientific findings to as wide an educated audience as possible, and to help keep scientists, interested citizens, and leaders of this region up to date on scientific progress relevant to the Great Plains.
