Revegetation Information Monitoring and Analysis Software

for reclamation managers
environmental coordinators
and those concerned with
monitoring vegetation

RIMA is a comprehensive vegetation data base management and analysis system for storage, retrieval, summarization, graphic portrayal, and reporting of data from reclaimed and native lands. The software is easy to use and runs on a microcomputer with an MSDOS operating system.

RIMA dramatically reduces time expenditures, organizes and stores data and helps you stay on top of vegetation trends.

Natural Resource Policy and Income Distribution

Adam Rose, Brandt Stevens, and Gregg Davis

"An important forward step... The loose ends that, up to now, characterized modeling of the personal and functional income flows have finally been tied together."

— Wassily Leontief, Nobel Laureate, from the foreword

"This work deals with a timely and important problem, but one that has been little studied. It is an innovative and pioneering venture with a stimulating approach, and it will help advance the field." — Marion Clawson, *Resources for the Future*

Policies involving natural resources have major effects on the distribution of income among individuals, regions, and industries. This book introduces the most comprehensive multisector model yet developed to measure income distribution based on primary data, allowing researchers and policymakers to analyze and predict the gains and losses from natural resource policy decisions.

The Economics of Afforestation

A Case Study in Africa

Dennis Anderson

In large areas of developing countries, the loss of trees is causing soil erosion and diminished fertility, posing major problems for economic development. By translating the ecological benefits of afforestation into economic terms, Dennis Anderson demonstrates that investments in the environment often serve the economy as well.

With special reference to Africa, Anderson discusses why afforestation has not been widely adopted and suggests some policy changes to promote the planting of trees. A case study of the arid zone of northern Nigeria illustrates the ecological and agricultural benefits that such a program might produce — and the declines in soil fertility and farm incomes that would occur without it.

LANDSCAPE JOURNAL

Founded: 1981

Editors: Darrel Morrison / Arnold Alanen

... explores a variety of topics related to the design, planning, and management of the land. LJ is dedicated to the dissemination of academic research, scholarly investigation, and technical information of interest to practitioners, academicians, and students of landscape architecture. Typical subject areas include: visual quality assessment, human behavior and the environment, historic and cultural landscape preservation and management, landscape history, planting design, vegetation management, landscape restoration and reclamation, land information systems, and landscape-related energy concerns.

ISSN 0277-2426

Published twice yearly by The University of Wisconsin Press.

Books for Successful Resource Management

Western Water Made Simple

from the editors of
High Country News

Winner, 1986 George Polk Award for Environmental Reporting

"... beyond the appealing hoopla about 'making the desert bloom' lies a stark reality: most of those dams and canals busily lacing the West are designed to pipe money into the pockets of the powerful few. This is not wild-eyed, yellow journalism. Marston's documentation of the Gargantuan scam will leave taxpayers wincing."

U.S. Water News

Four special water-issues of *High Country News* are available for the first time in book form. In clear language, highlighted with case studies, *Western Water Made Simple* outlines the complex issues of Western water by focusing on the West's three great rivers—the Colorado, the Columbia, and the Missouri.

\$15.95 Paper, 224 pp., maps, photographs, bibliography, index,
ISBN 0-933280-39-4

Federal Lands: A Guide to Planning, Management, and State Revenues

By Sally K. Fairfax and Carolyn E. Yale

"This 252-page book made five file cabinets of document, reports, and legal analyses obsolete."

Dave Albersworth
Director, Public Lands and Energy
National Wildlife Federation

Here is the only comprehensive reference on the management and allocation of revenues from resources on public lands. This book outlines the legal history and details of over twenty acts regulating natural resources, specifically forests and timber, range land, oil and gas, geothermal energy, and minerals.

\$24.95 Paper, 250 pp., charts, maps, bibliography, index
ISBN 0-933280-33-5

Also Exclusively Available
with Case Studies

The Report of the President's Commission on Americans Outdoors: The Legacy, The Challenge. The only complete report including the more than 60 recommendations, 12 case studies of successful community initiatives, extracted state testimony, and over 150 pages of appendixes, charts, graphs, and lists.
