

CHESAPEAKE BAY: NATURE OF THE ESTUARY, A FIELD GUIDE

by Christopher White,
with drawings by Karen Teramura

Destined to be *the* definitive field guide to the Chesapeake Bay, this book contains over 350 superb pen-and-ink drawings that illuminate the most important field marks; more than 500 species are described in the accompanying text. Aquatic and wetland plants; invertebrates; freshwater, estuarine, and marine fishes; amphibians; reptiles; mammals; swamp, marsh, shore, and water birds are all represented in this benchmark work that is as visually appealing as it is useful. **\$12.95**

Announcing the publication of

Dynamics of Soil Organic Matter in Tropical Ecosystems

Edited by David C. Coleman, J. Malcolm Oades, and Goro Uehara

More than 50 experts in the field of soil organic matter worked together to produce *Dynamics of Soil Organic Matter in Tropical Ecosystems*. Funding for the project was provided by the National Science Foundation Ecology Program, and top minds in the field of soil organic matter presented their current knowledge on these seven key topics:

- Constituents of Organic Matter in Temperate and Tropical Soils
- Soil Organic Matter as a Source and a Sink of Plant Nutrients
- Interactions of Soil Organic Matter and Variable-Charge Clays
- Biological Processes Regulating Organic Matter Dynamics in Tropical Soils
- Organic Input Management in Tropical Agroecosystems
- Modeling Soil Organic Matter Dynamics in Tropical Soils
- Methodologies for Assessing the Quantity and Quality of Soil Organic Matter

Published for the University of Hawaii, College of Tropical Agriculture and Human Resources, Department of Agronomy and Soil Science
\$30.00, clothbound

To order: Send check or money order, plus \$1.00 for shipping. VISA and MasterCard also accepted (include acct no., exp. date, and signature).

COMMON LEGUMES OF THE GREAT PLAINS

AN ILLUSTRATED GUIDE

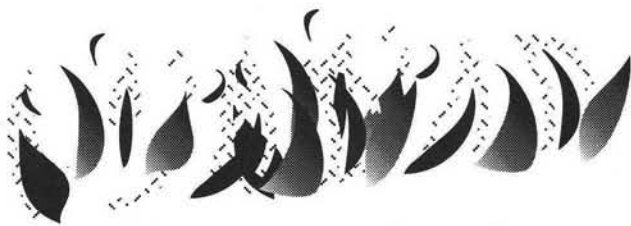

By James Stubbendieck and Elverne C. Conard

Illustrated by Bellamy Parks Janson

This is the first illustrated guide to the legumes to be found in 13 central plains states and three Canadian provinces. *Common Legumes of the Great Plains* presents keys to the families, genera, and species of these plants, describing the life span, origin, and height of each, as well as their stems, leaves, flowers, and fruit. Included are distribution maps and botanical illustrations for the 106 most common and important species. Relative habitat and abundance are discussed, and so are seed production, means of establishment, landscape value, and erosion control characteristics. Based on modern taxonomy, the book contains an index and glossary. It is certain to become a standard reference of value to the rancher, farmer, and naturalist as well as to the botanist and taxonomist. \$35.00

Prescribed Burning

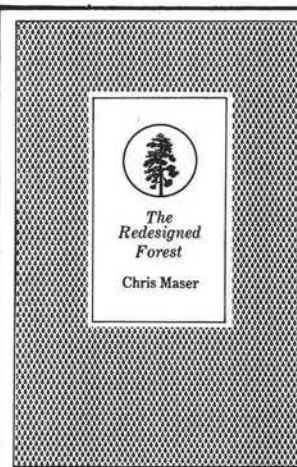

*In California Wildlands Vegetation
Management*

HAROLD BISWELL

Biswell's decades of research and field experience have been a major factor in developing new policies of controlled or prescribed burning to mimic or reintroduce the natural fire cycle. His comprehensive study introduces the principles and practices of prescribed burning, and includes a historical and ecological perspective on them.

The Redesigned Forest

by Chris Maser

The work of Chris Maser, a former BLM employee, stands as perhaps the most striking testament to the ferment that is now taking place within the federal land agencies.

The Redesigned Forest is a provocative, highly readable call to arms for fundamental reform of our policy toward old growth forests. Maser's creative thinking and writing surely will figure prominently in the comprehensive reassessment that we are now undergoing in regard to our treatment of the nation's forest lands.

— Charles F. Wilkinson

Professor of Law

University of Colorado at Boulder

Revegetation Information Monitoring and Analysis Software

for reclamation managers
environmental coordinators
and those concerned with
monitoring vegetation

RIMA is a comprehensive vegetation data base management and analysis system for storage, retrieval, summarization, graphic portrayal, and reporting of data from reclaimed and native lands. The software is easy to use and runs on a microcomputer with an MSDOS operating system.

RIMA dramatically reduces time expenditures, organizes and stores data and helps you stay on top of vegetation trends.
