

# North American Range Plants

## Fourth Edition

James Stubbendieck, Stephan L. Hatch, and  
Charles H. Butterfield  
Illustrated by Bellamy Parks Jansen

"This is *the* textbook for courses on range plant identification offered at universities throughout the United States, Canada, and Mexico." – Gary E. Larson, director and curator, South Dakota State University Herbarium. This fourth edition is distinguished by more detailed taxonomic information on each of the species and a complete set of new, larger illustrations. February. \$20.00 pa, \$45.00 cl

Also available by James Stubbendieck and Elverne C. Conrad  
**Common Legumes of the Great Plains**  
*An Illustrated Guide*, \$37.50

## Wisconsin Birdlife

### *Population and Distribution Past and Present*

Samuel D. Robbins, Jr.

A complement to field guides, picture books, and recordings, *Wisconsin Birdlife* is a veritable ornithological encyclopedia, designed to enrich birders' understanding and appreciation of the historical distribution, abundance, and habitat preference of every bird species reliably recorded in Wisconsin. It includes detailed accounts of over 400 species with information on population and distribution, habitat, migration dates, breeding data, and wintering presence.

736 pages 1 color plate, 54 halftones, 170 maps  
Cloth \$75.00

Forthcoming this Spring!

## Wildlife-Habitat Relationships

### *Concepts and Applications*

Michael L. Morrison, Bruce G. Marcot, and R. William Mannan

To aid the student and the professional, this book explains fundamental concepts of both wildlife habitat theory and statistical modeling and analysis. It is the first major effort to bring together the theoretical framework and the practical applications of research on wild animals and their habitats. The extensive literature review is a base of information valuable to all researchers.

11 illus., 64 figures

## Revegetation Information Monitoring and Analysis Software

for reclamation managers  
environmental coordinators  
and those concerned with  
monitoring vegetation

RIMA is a comprehensive vegetation data base management and analysis system for storage, retrieval, summarization, graphic portrayal, and reporting of data from reclaimed and native lands. The software is easy to use and runs on a microcomputer with an MSDOS operating system.

**RIMA dramatically reduces time expenditures, organizes and stores data and helps you stay on top of vegetation trends.**

(Reticle finer than shown)

### Uses

- o Monitoring of restored areas
- o Assessment of cover performance standards
- o Baseline studies
- o Erosion control modeling studies

# Cover - Point

## Optical Point Projection Device

*for use in point-intercept cover sampling*

### Technical features

- o High-resolution optics including microscope reticle (crosshairs)
- o Very low parallax (stable point projection)
- o Downward or upward projection, allowing equitable treatment of overstory and understory strata plants (Model 3)
- o Ten-points spaced along a one-meter bar (downward projection only, Model 4)
- o Lightweight, rugged construction
- o Mounts on standard photographic tripods

### Model 3 - Specifications

Length: 55.4 cm  
Weight: 701 gm (1.6 lb)  
Focus range: 18 cm to infinity  
Magnification: 5X  
Projected point size: approx. 0.07 mm

### Model 4 - Specifications

Length: 118 cm  
Weight: 899 gm (2.0 lb)  
Focus range: 40 cm to 200 cm  
Magnification: 5X  
Projected point size: approx. 0.07 mm

### Pricing

Model 3 (Up and down).....\$845  
Model 4 (10 points, down only)....\$875
