Propagules of longhair, bristly or beak-tooth sedge (*Carex comosa*); the perigynia is 0.2-0.32 inches (5.0-8.0 mm) long. Dr. Fatimata Palé suggests that in addition to shape, propagule length can be quite useful when identifying species in the Cyperaceae. Beginning on page 35, she describes her work in Pennsylvania, and offers an identification key and series of photographs that illustrate her methodology. Photos by Fatimata Palé.
