John W. Munro

John Munro, a long-time ecological restoration practitioner from Pennsylvania, makes the case that ecological restoration practices hold a distinct and honorable place within the larger world of conservation practices. In his article, which starts on page 182, he outlines the differences between ecological restoration and many allied conservation and design practices, and describes what can be done to make these practices more like ecological restoration. If that is impossible or unlikely, he argues for calling them what they are and not mislabeling them as ecological restoration projects. *Plan drawing courtesy of Munro Ecological Services*
