Treat the earth well: It was not given to you by your parents, it was loaned to you by your children. We do not inherit the Earth from our ancestors, we borrow it from our children.

—Author unknown

---

Ecological Restoration is indexed in Elsevier BIOBASE, AGRICOLA and in CSA’s Ecology databases.

Ecological Restoration was founded at the University of Wisconsin–Madison Arboretum.

Front Cover: Eelgrass (Zostera marina) in Bullhead Bay, Peconic Estuary, Southampton, New York, with rough periwinkles (Littorina saxatilis) grazing on leaves. To read about seagrass recovery and restoration, turn to pages 73 and 82. Photo by Chris Pickerell

Back Cover: The pink-flowered Henderson’s checker mallow (Sidalcea hendersoni), seen here poking up among drift logs in a salt marsh near the mouth of the Columbia River estuary, is endemic to coastal Oregon, Washington, and British Columbia. Historically common, it is now rare throughout its range. Conservation and protection efforts by state, federal, and nonprofit organizations target this and other rare and threatened species in the Pacific Northwest. Kathleen Sayce and Amy Borde recently “discovered” this species in the lower Columbia. Turn to pages 94 and 111 regarding restoration programs in the Columbia River estuary. Photo by Ronald Thom
INSTRUCTIONS FOR CONTRIBUTORS

Submissions

We welcome submissions to *Ecological Restoration* from any part of the world that relate to the restoration of plants, animals, ecological communities, or landscapes. Manuscripts may consider ecological and cultural aspects of restoration, as well as political, economic, legal, philosophical, and regulatory issues, urban restoration, and other subjects related to the ongoing development of the endeavor. Relevant topics also include techniques and tools for planning, species introduction, undesired species control, and monitoring. Manuscripts dealing with plant or animal community composition or general ecology must explicitly address restoration practice and theory. Similarly, material dealing with reclamation or rehabilitation, or with economic goals—economic forestry, range management, water quality—must relate to ecological restoration.

Material may be submitted for the following categories (listed as they are encountered in the journal): Letters to the Editor; Editorials; Policy Reports; Restoration Notes (shorter items describing projects, collaborations, events, innovative technologies, preliminary or unusual findings, thought-provoking concepts, imaginative solutions, etc.); full-length Manuscripts (case studies, research reports, photo essays, experiments, etc.); and book, journal, web, or movie Reviews.

Authors should send their material to *Ecological Restoration* editor via email (journals@uwpress.wisc.edu). Manuscripts must be submitted with a cover letter stating that the material has not been previously published, has not been submitted elsewhere, and will not be until a final decision has been reached by the editor.

Review and Editing Process

All efforts are made to find appropriate peer reviewers for research and practitioner-oriented manuscripts (typically a minimum of three anonymous reviewers). The process requires approximately four months. Authors are welcome to suggest appropriate reviewers. Restoration Notes are reviewed and edited in-house unless additional expertise is required to evaluate the submission. The editors reserve the right to edit for style and clarity.

Style

Contributors should use a straightforward style free of unnecessary technical terms and jargon. We prefer the active voice (for example, “We measured three trees” instead of “Three trees were measured”). We do not require the standard research publication format and encourage alternative formats, such as case studies with well-developed discussions of lessons for practitioners, or articles on a specific study, beginning with a brief overview and including a discussion of the practical applications for restoration. Extensive quantitative data or detailed statistical analyses can be included as online supplementary material.

Manuscript Specifications and Format

For additional format specifications please refer to www.ecologicalrestoration.info/instructionsForContributors.asp. We appreciate full-length manuscripts kept below 5,000 words, although we will accept longer pieces. Manuscripts should include a 250-word abstract plus up to five alphabetized keywords. Author affiliation and contact information should be at the end of the article after the references. Restoration Notes are generally a maximum of 1,500 words and may include up to two accompanying graphics. Book reviews are typically less than 2,000 words. Manuscripts should be one-and-one-half spaced with one-inch margins.

Avoid footnotes. We use metric measurements. Write out numbers ten and under, except when supplying measurements or in tables. Spell out each acronym the first time it is used: warm-season grasses (WSG). Scientific names for all species should be presented in italics and parentheses after the first usage of each common name in the text: Culver’s root (*Veronicastrum virginicum*). The Integrated Taxonomic Information System is our default nomenclatural authority, but authors may use regional taxonomic sources when cited appropriately. Statistical terms and other measures should conform to the Council of Biology Editors Style Manual. Please consult the Chicago Manual of Style (15th ed.) and the Merriam-Webster Dictionary (11th ed.).

Authors of Restoration Notes and book reviews should keep references to a few key citations. We use the author-date system for in-text citations: (Xi et al. 2008a, 2008b, Smart and Dick 1999, ISCO 2006). Please see example references on our web site, in the free online issue, and below:

Tables, Photos, and Illustrations

Captions should be useful and detailed and include photo credits. Photographs can illustrate or augment an article. Figures will be black and white in the print version of *Ecological Restoration* (usually requiring higher contrast) and can be reproduced in color in the online version. We welcome submissions of eye-catching, high-quality color photographs for the front and back covers of the journal. MS Word is the preferred format for tables. Figures must have a minimum resolution of 300 dpi for photos at print size, 400 dpi for images containing text, and 600 dpi for images containing fine details. Please refer to www.wisc.edu/wisconsinpress/journals/preparing_illustrations.html.
