

Ecological Restoration

Volume 30, Number 1

March 2012

SER Editorial	1
4th World Conference on Ecological Restoration <i>Steve Whisenant</i>	
Errata	2
Editorial	3
The Red Queens of Restoration <i>Steven N. Handel</i>	
Announcement	5
Society for Ecological Restoration 2011 Call to Action	
Letter to the Editor	7
<i>Robin R. Lewis</i>	
RESTORATION NOTES	
Passive Soil Manipulation Influences the Successional Trajectories of Forest Communities at a Denuded Former Campsite <i>Nate Hough-Snee, A. Lexine Long, and Rodney Pond</i>	9
Ibity Mountain, Madagascar: Background and Perspectives for Ecological Restoration <i>Swanni T. Alvarado, Elise Buisson, Harison Rabarison, Chris Birkinshaw, and Porter P. Lowry II</i>	12
Generating Heterogeneity: Construction of Fish Hooks in the Humber River Induces Community Change <i>Monica Granados, Meg St John, and Rick Portiss</i>	15
An Assessment of Foliar Application of Triclopyr of Varying Concentrations for Managing Glossy Buckthorn (<i>Frangula alnus</i>) Seedlings and Resprouts (Michigan) <i>Andrew DiAllesandro</i>	18
ARTICLES	
Response of Terrestrial Arthropod Assemblages to Coastal Dune Restoration <i>John W. Doudna and Edward F. Connor</i>	20
The Dynamic Reference Concept: Measuring Restoration Success in a Rapidly Changing No-Analogue Future <i>John K. Hiers, Robert J. Mitchell, Analie Barnett, Jeffrey R. Walters, Michelle Mack, Brett Williams, and Rob Sutter</i>	27
Ecological Restoration Priorities and Opportunities in Piñon-Juniper Woodlands <i>M. Lisa Floyd and William H. Romme</i>	37
Initial Plant Growth in Sand Mine Spoil Amended with Peat Moss and Fertilizer Under Greenhouse Conditions: Potential Species for Use in Reclamation <i>Todd A. Aschenbach, Elizabeth Brandt, Melissa Buzzard, Ryan Hargreaves, Thomas Schmidt, and Amanda Zwagerman</i>	50
Trees, Deer, and Non-Native Vines: Two Decades of Northern Piedmont Forest Restoration <i>David J. Robertson</i>	59

DESIGN APPROACHES TO ECOLOGICAL RESTORATION

Strategies for Enhancing Marine (and Human) Habitat at Brooklyn Bridge Park <i>Matthew Urbanski and Rachel Gleeson</i>	71
Commentary on <i>Strategies for Enhancing Marine (and Human) Habitat at Brooklyn Bridge Park</i> <i>Kenneth W. Able and Thomas M. Grothues</i>	76
Commentary on <i>Strategies for Enhancing Marine (and Human) Habitat at Brooklyn Bridge Park</i> <i>Gary L. Taghon</i>	77
Brooklyn Bridge Park: A Win-Win for the People of Brooklyn and the Environment <i>Dianna K. Padilla</i>	78

ABSTRACTS

Grasslands	79	Ecological Design	83
Woodlands	79	Climate Change	83
Wetlands	80	Monitoring & Adaptive Management	84
Lakes, Rivers & Streams	80	Reclamation & Rehabilitation	84
Coastal & Marine Communities	81	Urban Restoration	85
Other Communities	81	Endangered Species	85
Propagation & Introduction	81	Economics & Ecosystem Services	86
Invasive & Pest Species	82	Planning & Policy	86
Wildlife Habitat Restoration	82		

BOOK REVIEWS

Beyond Naturalness: Rethinking Park and Wilderness Stewardship in an Era of Rapid Change <i>David N. Cole and Laurie Yung (eds), reviewed by Timothy Babalis</i>	86
Tallgrass Prairie Center Native Seen Production Manual <i>Greg Houseal, reviewed by Lauren Axford and Timothy Chambers</i>	87

CALL FOR EXAMPLES OF CORRIDOR RESTORATION

Ecological Restoration is planning a Special Issue for later this year on the “Ecological restoration of habitat corridors,” at all scales. The use of, and interest in, corridors as a remedy for wide-scale habitat fragmentation has attracted much attention. Corridors are being considered from the small scale (road crossings, avoidance of dams) to very large landscapes (continental-scale corridors that may facilitate life history needs of migratory and wide-ranging species). This Special Issue will have reviews of current approaches to corridor functioning and implementation, as well as papers on modern designs of corridors.

We now seek *examples from practitioners of designed and built habitat corridors* that can express the current state of the art of habitat design and functioning. We are also interested in examples of older corridors, where performance monitoring has been conducted. These restoration notes usually have a maximum length of 1,500 words, with 2 illustrations. We would appreciate submissions by April 1, 2012. Submissions should be to the journal website, er.uwpress.org. Please contact the Editorial Office if you have any questions, if desired.

This is an opportunity to communicate your corridor work and lessons learned to the restoration community and also to solicit useful advice.
