DriWater time release water gel is an innovative approach to remote planting irrigation and long-term watering. A non-polymer that supplies plants with water for up to 90 days. Safe, 100% degradable, consisting of 98% potable water and 2% food grade ingredients.

- Increases rooting up to 190%*
- Establishes trees in one growing season*
- Reusable, low profile, Tube and Gel packs for areas of high visibility
- Prolongs time between watering
- Non Polymer: does not compete for moisture
- Reduces transplant shock
- Supplies plants moisture at the root
- Avoids topical moisture reducing pests & weeds

When irrigation is impractical, DriWater® can help.

Ideal for soil erosion projects & post-fire rehab

* Based on seasonal benefit planting study. For more information contact driwater@driwater.com
Our firm specializes in sustainable invasive plant species management and control. We incorporate whole plant removal techniques followed by native plant species installation and establishment.

We provide services in ecologically based, naturalized planting and wildlife habitat design. Our areas of specialty are wetland restoration, mitigation and construction.

We focus on finding utility in what would otherwise be wasted materials. For example, our harvests of Japanese Knotweed provide forage for the hoop and horn stock at a local zoo. Woody invasive species are either chipped and used on nature trails or used as composting material.

Our naturalized designs are founded on sound ecological principles and suited for the local area and environmental conditions.

“Those who would learn how to carry out a restoration project, or teach others how to do so, have been hindered by the immense complexity of the field, and by the lack of a solid textbook to draw on. Susan Galatowitsch’s excellent new text goes a long way toward solving both these problems.”

— Barry R. Taylor, The Canadian Field-Naturalist

Ecological Restoration provides a comprehensive overview of the strategies being used around the world to reverse human impacts to landscapes, ecosystems, and species. This book aims to improve the outcomes of restoration practice by strengthening the connections between ecological concepts and real-world decision-making: students explore each topic considering both research-based knowledge and lessons learned from nineteen actual restorations. Details of these ecological restorations, from underwater reefs to mines in hot deserts, are woven into each chapter, presented as case studies, and used in exercises. Because introductory ecological restoration courses are taken by undergraduate students from a wide variety of academic backgrounds, the book explains and applies basic concepts from many supporting fields that serve as the foundation for practice, including ecology, conservation biology, earth and water sciences, environmental design, and public policy.

Restored to Earth
Christianity, Environmental Ethics, and Ecological Restoration
Gretel Van Wieren
“For a planet that, like ecological restoration itself, is pitched between lament and hope, Van Wieren’s work builds the needed bridges, bridges that let moral and spiritual dimensions join scientific ones. The result is a multifaceted culture of restoration in which we, too, are ‘restored to Earth.’ Moreover, the writing is clear and accessible, wholly capable of reaching the wide audience it deserves.”
—Larry Rasmussen, Reinhold Niebuhr Professor Emeritus of Social Ethics, Union Theological Seminary

978-1-58901-997-3, paperback, $29.95

Oil and Wilderness in Alaska
Natural Resources, Environmental Protection, and National Policy Dynamics
George J. Busenberg
“This book presents the results of years of archival research supplemented with interviews to present a well-informed and empirically rich history of several substantial policy developments. . . . It will be seen for years as the most comprehensive treatment of environmental politics in Alaska and as an excellent study of the nature of policy change more generally.”
—Frank Baumgartner, Richard J. Richardson Distinguished Professor of Political Science, The University of North Carolina at Chapel Hill

American Governance and Public Policy series

The Future of Ethics
Sustainability, Social Justice, and Religious Creativity
Willis Jenkins
“Rather than a book of despair, Jenkins argues for the possibility of religious ethics charting new strategies of moral agency by working within the traditions that form constantly shifting communities to meet the challenges of climate change and sustainability. Carefully argued, creative, and well-written, Jenkins challenges assumptions. This is a must read book.”
—Emilie Townes, Dean and Carpenter Distinguished Professor of Ethics and Society, Vanderbilt Divinity School

ZENTNER

Land Planning and Restoration

Success of environmental restoration projects is measured by their performance over time. That success is a direct reflection of the skill of the restoration team—and its ability to solve complex ecological and regulatory issues. Over the last decade, Zentner and Zentner has managed over 500 restoration projects.

Our services include:
- Wetland Delineations
- Restoration and Mitigation Planning
- Biological Assessments
- Endangered Species: Section 7 and 2081 Approvals
- Regulatory Planning and Permitting
- Construction and Post Construction Monitoring

conceptual approaches to ethical theory and ecological philosophy

EDITED BY VICTORIA DAVION

Ethics & the Environment is an interdisciplinary forum for theoretical and practical articles, discussions, reviews, and book reviews in the broad area encompassed by environmental ethics. Topics include conceptual approaches to ethical theory and ecological philosophy, such as deep ecology and ecological feminism as they pertain to such issues as environmental education and management, ecological economies, and ecosystem health.

ESSENTIAL GUIDES FROM PURDUE UNIVERSITY

NATIVE TREES OF THE MIDWEST
Identification, Wildlife Values, and Landscaping Use
Sally S. Weeks, Harmon P. Weeks, Jr., and George R. Parker
Paperback, 9781557535726, $45.00 | E-book available, $22.99
Native Trees of the Midwest is the guide to identifying trees in Indiana and surrounding states, written by three leading forestry experts. Descriptive text explains how to identify 131 species in any season and over 750 color photographs show all important characteristics.

Not only does the book allow the user to identify trees and learn of their ecological and distributional attributes, but it also presents an evaluation of each species relative to its potential ornamental value for those interested in landscaping. Since tree species have diverse values to wildlife, an evaluation of wildlife uses is presented with a degree of detail available nowhere else. The revised and expanded second edition contains a chapter on introduced species that have become naturalized and invasive throughout the region.

SHRUBS AND WOODY VINES OF INDIANA AND THE MIDWEST
Identification, Wildlife Values, and Landscaping Use
Sally S. Weeks and Harmon P. Weeks, Jr.
Paperback, 9781557536105, $45.00 | E-book available, $22.99
As the definitive identification guide to the shrubs and woody vines of Indiana, this book also provides coverage of 90% of the species to be found in surrounding Midwestern US states. As well as covering indigenous species, it also includes all currently known invasive shrubs.

Descriptive text explains how to identify all 165 species in any season, and over 1300 original color photographs taken by Sally Weeks detail all important characteristics. The authors provide practical guidance concerning the potential ornamental value of each species for those interested in landscaping and also evaluate their potential value for encouraging wildlife. Designed for experts in natural resource management as well as the interested general public.

THE COMPLETE PLANT SELECTION GUIDE FOR LANDSCAPE DESIGN
Marc C. Stoecklein
Paperback, 9781557535467, $55.00
The second edition of this easy-to-use reference guide for choosing plant material for landscape designs includes comprehensive lists for each of the major plant groups, including trees, shrubs, groundcovers, perennials, vines, grasses, and ferns. The book is technical enough for the professional (including landscape architects, designers, and contractors), yet simple enough to be used by the layperson.

“The beauty of this book is that anyone can use it. You don’t need a PhD to figure out what plants will work for you in a specific area. Have a wet area? Look up the list of trees, shrubs, etc., that thrive there. Need a tree that can take full sun or one that can tolerate urban conditions? Look it up. If you are an avid gardener, you should add this to your library. It should be required reference material in any landscape architecture or design course.”

—Susan Banks, Gardens Editor, Pittsburgh Post-Gazette
