

Aldo Leopold

His Life and Work
Curt Meine

Aldo Leopold is unique in the degree to which his life and work continue to exert influence on those who are concerned with the quality of our natural environment. This book is written for those who wish to understand this unusual and gifted man better, as well as for those who wish to gain greater insight into the

evolution of the American landscape. The first comprehensive biography, it will stand as definitive for years to come.

"This is a story well worth reading and, happily, it's good fun to boot. The author has skillfully captured Leopold the man, the scientist, the philosopher—furthermore, anyone who begins to read it will soon be captured, too."

—Gaylord Nelson
The Wilderness Society

"... the core of American thinking about conservation runs from Thoreau to Muir to Leopold Leopold is the most significant conservationist of the last seventy years; and this is the first full-scale biography, the first to make such extensive use of the Leopold papers. Thus it makes available reams of material that can be found nowhere else. There is no other book like this one."

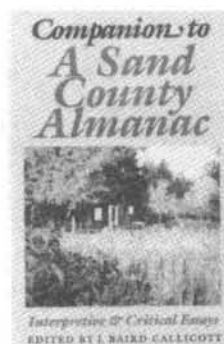

—Stephen Fox

Companion to A Sand County Almanac

Edited by J. Baird Callicott

Praised by the *New York Times* for its "high quality" and by *Sierra* for being "first rate," this collection of articles, written by the leading scholars of Leopold and environmental ethics, represents the first sustained look at Leopold's seminal book as a work of art, philosophy, and social commentary. It will en-

rich the general reader's appreciation of a favorite literary friend while it provides new information and thoughtful analysis for environmental scholars, managers, and planners.

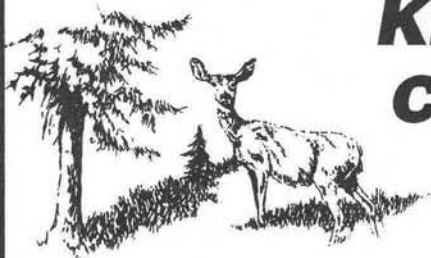

"J. Baird Callicott does for this contemporary vade mecum what Philip Van Doren Stern's *The Annotated Walden* did for Thoreau's great work. Roderick Nash pursues Leopold's intellectual heritage. Susan Flader details the history of Leopold's woodland hideaway. Wallace Stegner analyzes the legacy of what he calls an 'almost holy book.' The authority of these and other contributors both confirms its subject's centrality to 20th-century thought and marks the study itself as vital to a wider understanding of its birth."

KRIEGER BRINGS YOU CLOSER TO WILDLIFE

THE PHILOSOPHY AND PRACTICE OF WILDLIFE MANAGEMENT

by Frederick F. Gilbert &
Donald G. Dodds

Orig. Ed. 1987 292 pp. \$24.50
ISBN 0-89874-911-5

Most books on wildlife management tend to stress ecology and wildlife biology, failing to recognize that biopolitics are the true basis of effective management. This book, using examples from Canada, the United States, and developing countries, shows the mechanisms and historical foundations of wildlife management. It traces the evolution of increasingly sophisticated approaches to the management of our natural fauna. Drawing on the author's own experiences, the book becomes a personal account of how wildlife management works and why, sometimes, it doesn't

"This book explains very nicely why there always has been and always will be more than ecology and biology to wildlife management."-

Wildlife Management Institute OUTDOOR NEWS BULLETIN Volume 41, Number 23

"Contains valuable information about how to use the Environmental Impact Statement (EIS) process to preserve and protect wildlife."-

The Redesigned Forest

by Chris Maser

The work of Chris Maser, a former BLM employee, stands as perhaps the most striking testament to the ferment that is now taking place within the federal land agencies.

The Redesigned Forest is a provocative, highly readable call to arms for fundamental reform of our policy toward old growth forests. Maser's creative thinking and writing surely will figure prominently in the comprehensive reassessment that we are now undergoing in regard to our treatment of the nation's forest lands.

— Charles F. Wilkinson
Professor of Law
University of Colorado at Boulder

September 1988: cloth, \$18.95; paper, \$9.95 (if ordered from publisher, please add \$2.00 for postage/handling).

Revegetation Information Monitoring and Analysis Software

for reclamation managers
environmental coordinators
and those concerned with
monitoring vegetation

RIMA is a comprehensive vegetation data base management and analysis system for storage, retrieval, summarization, graphic portrayal, and reporting of data from reclaimed and native lands. The software is easy to use and runs on a microcomputer with an MSDOS operating system.

RIMA dramatically reduces time expenditures, organizes and stores data and helps you stay on top of vegetation trends.

Introducing Practical Solutions From Island Press

Down by the River: The Impact of Federal Water Projects and Policies on Biodiversity

By Constance E. Hunt with Verne Huser

121 million acres of American riparian habitat has been reduced to only 23 million acres today. Threatened by a range of development projects, the health of these fragile river ecosystems cannot be ignored. **Down by the River** presents case studies of development projects on seven different rivers, illustrating their effects on biodiversity. In the final chapter, the book offers solutions for • Saving the Remaining Riparian Habitat • Reversing the Current Destructive Trends • Restoring Riparian Systems • Creating an Endangered Ecosystems Act.

256 pp. Cloth: \$34.95 Paper: \$22.95

Saving the Tropical Forests

By Judith Gradwohl and Russell Greenberg

Over half the world's species make their homes in tropical forests. As a result of deforestation, millions of them may become extinct before they are even identified. **Saving the Tropical Forests**, for the first time ever, presents practical solutions to the seemingly insoluble problem. The book examines 38 successful preservation projects and presents new strategies for • Tropical Forest Restoration • Sustainable Agriculture • Natural Forest Management • Forest Reserves.

NEW CAREER OPPORTUNITIES AT MICHAEL BRANDMAN ASSOCIATES

Michael Brandman Associates (MBA), a leading California environmental consulting firm with offices in Orange County, Los Angeles, and San Diego, has several career openings in its expanding Resources Management Division. These positions provide the opportunity to become a member of the largest and most successful team of terrestrial biologists and regulatory specialists in the Southern California environmental consulting industry. The company offers very progressive compensation and benefits, professional satisfaction, and a stimulating and friendly working atmosphere.

Candidates for all positions must possess outstanding analytical, interpretive, writing, communication, and interpersonal skills; working knowledge of western U.S. natural science, NEPA, and CEQA; strong commitment to excellence; and appropriate educational background and professional experience, as specified below.

Biological Services Section Director (O.C. Office) - Lead administrative and technical responsibility for 15-person group of terrestrial biologists; selected participation in management of large projects and in business development. Requires strong leadership, organizational, and administrative skills; MS/PhD in biology or related field; and minimum of 7 years professional consulting experience in biological impact assessment.

Senior Project Manager and Project Manager, Biological Services Section (O.C. Office) - Management and technical responsibility for wide range of terrestrial biological projects, including resource inventories, impact assessment, mitigation planning, habitat restoration/creation, T/E species surveys/management, etc. Requires strong organizational, leadership, and budget/schedule control skills; MS/PhD in biological sciences; and 5-10 years progressively responsible experience in biological impact assessment.

Senior Project Manager, Regulatory Services Section (O.C. Office) - Management and technical responsibility for large-scale, complex 404 and 1601/3 permitting projects. Requires strong organizational, leadership, and budget/schedule control skills; MS/PhD in biology, geography, or related field; and minimum of 5 years experience in coordinating the processing of 404 permits.

Habitat Restoration Specialist (O.C. Office) - Responsible for design, construction supervision, and monitoring of biological impact mitigation plans, especially involving riparian and coastal wetland habitat revegetation and creation. Requires strong creative skills and knowledge of native vegetation culture; MS/MLA in landscape architecture or related field; and minimum of 2 years experience in design and implementation of native habitat establishment plans.

Field Biologist/Research Analyst (O.C. and San Diego Offices) - Responsible for field surveys, data collection and interpretation, and preparation of written documentation related to a wide variety of terrestrial biological studies and impact assessments. Requires strong ecological and taxonomic understanding of Southern California habitats; BS/MS in biological sciences; and aspiration to become proficient in the field of biological impact assessment.
