

Cover - Point

Optical Point Projection Device

for use in point-intercept cover sampling

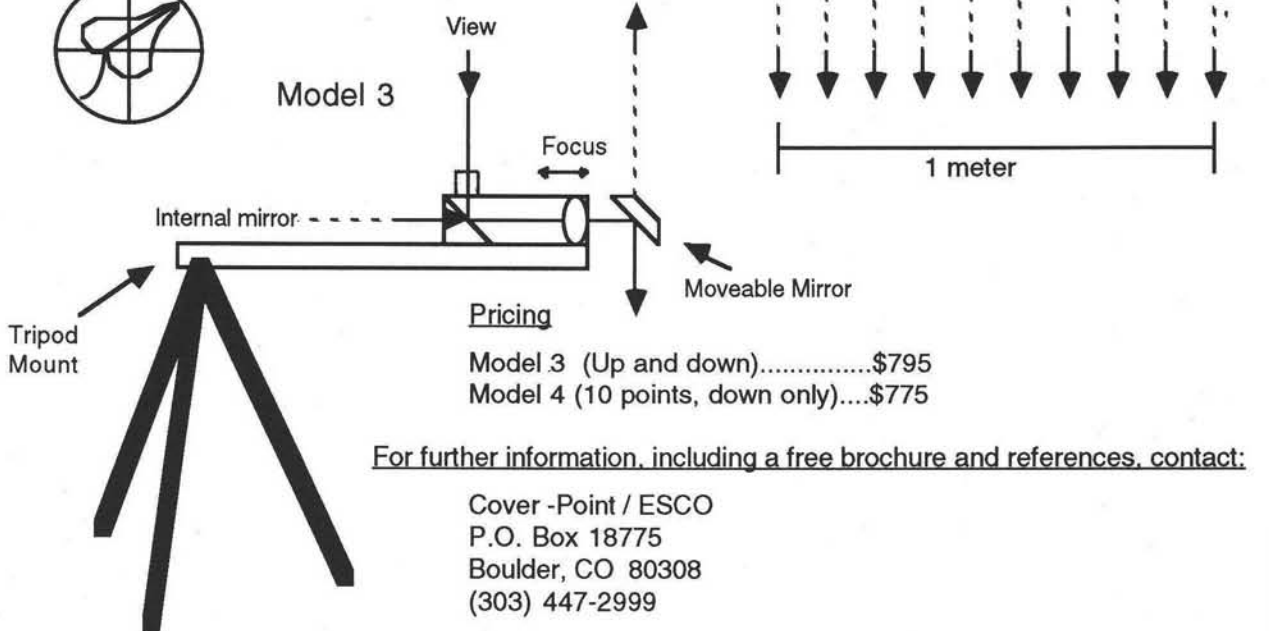

Uses

- o Monitoring of restored areas
- o Assessment of cover performance standards
- o Baseline studies
- o Erosion control modeling studies

Technical features

- o High-resolution optics including microscope reticle (crosshairs)
- o Very low parallax (stable point projection)
- o Downward or upward projection, allowing equitable treatment of overstory and understory strata plants (Model 3)
- o Ten-points spaced along a one-meter bar (downward projection only, Model 4)
- o Lightweight, rugged construction
- o Mounts on standard photographic tripods

View through eyepiece
(reticle finer than drawn)

Revegetation Information Monitoring and Analysis Software

for reclamation managers
environmental coordinators
and those concerned with
monitoring vegetation

RIMA is a comprehensive vegetation data base management and analysis system for storage, retrieval, summarization, graphic portrayal, and reporting of data from reclaimed and native lands. The software is easy to use and runs on a microcomputer with an MSDOS operating system.

RIMA dramatically reduces time expenditures, organizes and stores data and helps you stay on top of vegetation trends.

LANDSCAPE JOURNAL

Founded: 1981

Editor: Robert Riley

. . . explores a variety of topics related to the design, planning, and management of the land. **LJ** is dedicated to the dissemination of academic research, scholarly investigation, and technical information of interest to practitioners, academicians, and students of landscape architecture. Typical subject areas include: visual quality assessment, human behavior and the environment, historic and cultural landscape preservation and management, landscape history, planting design, vegetation management, landscape restoration and reclamation, land information systems, and landscape-related energy concerns.

Dynamics of Soil Organic Matter in Tropical Ecosystems

Edited by David C. Coleman, J. Malcolm Oades, and Goro Uehara

More than 50 experts in the field of soil organic matter worked together to produce *Dynamics of Soil Organic Matter in Tropical Ecosystems*. Funding for the project was provided by the National Science Foundation Ecology Program, and top minds in the field of soil organic matter presented their current knowledge on these seven key topics:

- Constituents of Organic Matter in Temperate and Tropical Soils
- Soil Organic Matter as a Source and a Sink of Plant Nutrients
- Interactions of Soil Organic Matter and Variable-Charge Clays
- Biological Processes Regulating Organic Matter Dynamics in Tropical Soils
- Organic Input Management in Tropical Agroecosystems
- Modeling Soil Organic Matter Dynamics in Tropical Soils
- Methodologies for Assessing the Quantity and Quality of Soil Organic Matter

Published for the University of Hawaii, College of Tropical Agriculture and Human Resources, Department of Agronomy and Soil Science
\$30.00, clothbound

To order: Send check or money order, plus \$1.00 for shipping. VISA and MasterCard also accepted (include acct no., exp. date, and signature).

Prescribed Burning

*In California Wildlands Vegetation
Management*

HAROLD BISWELL

Biswell's decades of research and field experience have been a major factor in developing new policies of controlled or prescribed burning to mimic or reintroduce the natural fire cycle. His comprehensive study introduces the principles and practices of prescribed burning, and includes a historical and ecological perspective on them.

The Redesigned Forest by Chris Maser

The work of Chris Maser, a former BLM employee, stands as perhaps the most striking testament to the ferment that is now taking place within the federal land agencies.

The Redesigned Forest is a provocative, highly readable call to arms for fundamental reform of our policy toward old growth forests. Maser's creative thinking and writing surely will figure prominently in the comprehensive reassessment that we are now undergoing in regard to our treatment of the nation's forest lands.

— Charles F. Wilkinson
Professor of Law
University of Colorado at Boulder

HARVARD

A REUNION OF TREES

The Discovery of Exotic Plants and Their Introduction into North American and European Landscapes

Stephen A. Spongberg

Prologue by Sam Bass Warner, Jr.

Stephen Spongberg's vividly written and lavishly illustrated "travel story" of trees and shrubs tells of intrepid and extraordinary explorers who journeyed to the far corners of the globe and brought back to Europe and North America a wealth of exotic plant species. It constitutes a veritable history of ornamental trees and shrubs.

8 1/2 x 11, 144 halftones, 29 color illus., 57 line illus., 272 pp., \$35.00 cloth

SUSTAINING THE EARTH

John Young

In this tour de force, John Young assesses the history of the environmental movement and makes a call to arms for an alternative attack on the problems. He maintains that only a powerful synthesis of political, economic, and moral ideologies—a unification he terms *postenvironmentalism*—will move world societies into a relation to the environment that maintains the best democratic values.

"Young expertly traces the many strains of the environmental movement and demonstrates how their best elements might be woven together to create a new and enduring political consensus. His book is a message of hope and common sense."

—Edward O. Wilson

Restoration Ecology

A Synthetic Approach to Ecological Research

**Edited by William R. Jordan III,
Michael E. Gilpin, and John D. Aber**

"By casting familiar questions in a different light and covering a wide variety of issues and environments, *Restoration Ecology* merits the attention of a broad spectrum of practicing ecologists..." — *Ecology*

Explores the ecological principles of habitat restoration through a theoretical approach that will appeal to ecologists concerned with community structure and dynamics.

1988 352 pp. 33728-3 Paper \$24.95

The Asian Elephant

Ecology and Management

R. Sukumar

Provides a scientific basis for conservation and management due to the decline of the Asian elephant through its former range. Explores the possibilities for reducing the conflict between human interests and elephant management.
